

# Grout Haze Removal and Reconditioning

## GRANULAR PASTES GROUT STRIPPER ■ LEGSOLVE-IT LIQUIDS TEXSPAR® ■ TEXSPAR PLUS®

LEGGE GROUT STRIPPER and LEGESOLVE-IT are formulations developed to be used by themselves or with TEXSPAR® or TEXSPAR® PLUS for difficult jobs. GROUT STRIPPER or LEG SOLVE-IT MUST BE PROPERLY DILUTED AND GENEROUSLY APPLIED TO THE TILE SURFACE. If needed, TEXPAE® or TEXSPAR® PLUS are added by cupful to the surface every 2-3 feet. The products are then scrubbed with a rotary scrubber or hand scrubber with an aggressive black pad for flat surfaces or a nylon grit brush for textured surfaces. Double scrubbing may be necessary for extremely difficult surfaces. Pick up solution with a wet vacuum and immediately flood rinse with clean water. Pick up again with wet vacuum and rinse several times to ensure proper removal of product from the tile and grout joints.

### PRODUCT RECOMMENDATIONS

- For Cementitious, Acrylic, Modified Sanded or Unsanded, Heavy dirt, Construction Debris, Grease, and Peach Fuzz use LEGGE GROUT STRIPPER in conjunction with TEXSPAR® or TEXSPAR® PLUS.
- FOR Epoxy or Urethane Grout, Stains, Dirty Dye Stains or Heavy Grease use LEG SOLVE-IT in conjunction with TEXSPAR® or TEXSPAR® PLUS

#### CAUTION

TEXSPAR or TEXSPAR PLUS can remove the shine from polished marble, Granite, or other soft stones.

### SAVE TIME WHEN GROUTING WITH EPOXY

Save 50-60% labor cost by using LEGSOLVE-IT in rinse water

1. Mix 2-3 ounces of LEGSOLVE-IT to 1 gallon of water (warm if available).
2. Wipe tile surface with grout sponge and LEGSOLVE-IT solution(diluted).
3. The solution will cut through surface film and help to eliminate epoxy grout haze.

### LEGGE GROUT INHIBITOR

#### HELPS PREVENT GROUT HAZE FROM OCCURRING

To help eliminate grout haze on any tile surface, use LEGGE GROUT INHIBITOR prior to grouting. LEGGE GROUT INHIBITOR forms a barrier between the tile and grout and is easily removed during final clean up

### ONGOING MAINTENANCE

#### A CRITICAL STEP

Tile and stone products are one of the most beautiful and decorative surfaces you can choose today. Unfortunately, most of us don't realize how we can destroy tile or grout by simply not using the proper cleaners.

FACT: Products containing bleach or acid can degrade the tile and grout joint making ongoing cleaning much more difficult as time goes on.

FACT: Bleach or acid do not have any cleaning ability. They work by reacting and/or by dissolving and eroding the surface each time they are used.

### THE CORRECT PRODUCTS

**LEGGE NEUTRAL CLEANER:** A neutral pH, biodegradable detergent made to clean all tile, marble and stone. This unique product contains an effective detergent structure that can be used often without damaging the surface.

**CITRONEX or LEGCLEAN®:** Two of the finest heavy-duty, concentrated cleaners available today for the toughest of cleaning jobs: grease, food, etc..

At only 1-2 ounces per 1 gallon of water, both products are an effective way to clean tile surfaces every day.

**FLOORSHINE R20®:** One of the first products to make the UL Listing back in the 1940s. FLOORSHINE R20 is an effective cleaner and leaves a satin coating that helps to increase slip resistance. FLOORSHINE R20 will not build up as it is non-filming and re-emulsifies with each use.
