

DEEP SEAL

URETHANE MODIFIED SEAL

* SEALS * PROTECTS * ENHANCES COLOR AND DEPTH *

DEEP SEAL is a water based acrylic seal which has been reinforced with urethane for added durability, exceptional wear properties and increased adhesion. Especially effective on glazed and unglazed ceramic tile, quarry tile, marble, slate, terrazzo, concrete etc. Provides permanent protection from dirt, oils and stains.

Use DEEP SEAL alone to protect flooring from environmental effects and traffic. Decreases maintenance time and labor by forming a barrier that dirt cannot penetrate. Provides a satin sheen to bring out the natural beauty of the flooring. Use as an undercoat for floor finish to further protect flooring and provide exceptional shine.

DIRECTIONS FOR USE:

1. Thoroughly clean floor with the appropriate LEGGE cleaner. Ensure floor is clean and dry before continuing. For new ceramic or natural stone installations, see directions for use of LEGGE GROUT INHIBITOR, GROUT STRIPPER and TEXSPAR/TEXSPAR PLUS.

Products designed to aid in the initial clean up of installations. For composition tile installations see directions for use of EZ RINSE STRIPPER and STRIPPER #457. Products designed for use on composition type tiles.

2. Saturate a new, clean mop with DEEP SEAL. Apply a medium coat, ensuring that the mop is in full contact with the floor at all times.

3. Allow DEEP SEAL to dry thoroughly, normal drying time is 30-40 minutes, depending on temperature and humidity. A second coat may be necessary, depending on the porosity of the floor. Floors may be further protected, and shine enhanced by the application of one of LEGGE's floor finishes.

4. Daily maintenance shall consist of mopping or auto-scrubbing with a solution of FLOORSHINE R20 (a combination cleaner/slip resistance enhancer that leaves a protective sheen on the surface and creates a highly non-slip surface - UL Listed) or one of LEGGE's all purpose cleaners. Floors may be dry buffed to enhance shine.
